

Recycled Leather

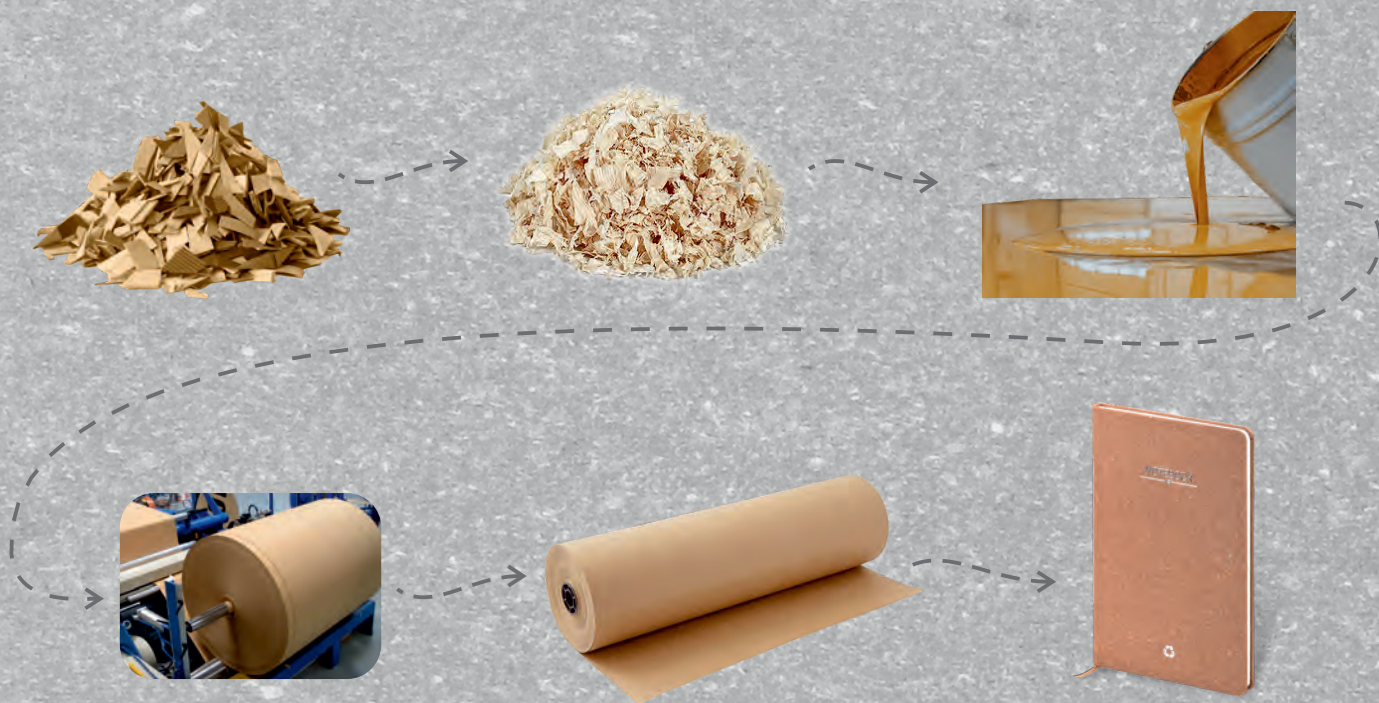

(Salpa)

www.dival.com.tr

Sustainable Elegance from Waste Leathers

Salpa is a soft and flexible material that emerges during the leather processing process. It is typically obtained from the processing of waste leather scraps.

With its high durability and aesthetic appearance, salpa provides a natural texture while also offering an eco-friendly alternative.

From Nature to Notebook

Sustainable Beauty from Leather Waste!

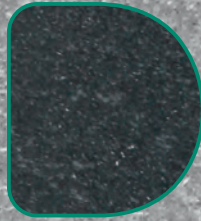

NOTEBOOK

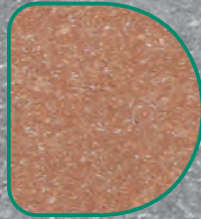

Salpa Notebooks, Sustainable Future!

The recycling of leather waste offers an effective solution to environmental issues. In this process, waste leather pieces are transformed into salpa, which is then used to create aesthetic and durable notebooks. As a natural material, salpa provides a stylish appearance while also serving as a sustainable alternative. This way, waste is repurposed with eco-friendly products, contributing to local economies. Notebooks made from leather waste not only raise environmental awareness but also help us take a hopeful step for our future.
