Ocean-Inspired Innovation: RPET

This notebook is a product that gives new life to plastic waste collected from our oceans.

It is made from recycled polyester fiber, known as RPET, which is obtained by converting existing plastic and textile waste into new polyester fiber.

Two waste bottles accumulating on the surface of the oceans can provide enough fiber for one notebook cover.

The Voice of the Seas

Eco-Friendly Notebook Made from Ocean Waste

Reduce Your Footprint on Nature

This notebook, carrying a story from the depths of the oceans on every page, is made from recycled plastic waste. Designed to reduce the harm caused by accumulated waste in our oceans to nature and marine life, this notebook aims to contribute to a sustainable future.

In this regard, at Dival, we produce nature- and human-friendly notebooks using entirely recycled materials, from the cover board to the fabric, and from the inner pages to the bookmark ribbons.
